Health Emergency and Disaster Nursing (HEDN) is an international peer-reviewed journal that publishes scientific research findings, including clinical, theoretical, and historical scholarship from around the world. It is a showcase for the most significant current research on all aspects of disaster nursing stemming from natural or human-made disasters. The journal publishes peer-reviewed research across the physiological, psychological, and social aspects of individuals, families, communities, and nations in all disaster environments. A diverse range of article types are available as Open Access and are often published within 30 days of acceptance.

Articles including original research reports, papers on methods, concept analyses, reviews, and image essays are all welcomed.

Early-career scholars are particularly encouraged to submit their best work so it can be read by our broad global audience of health practitioners, professionals and academic researchers.

Editor-in-Chief: **Barbra Mann Wall**, PhD, RN, FAAN
*Thomas A. Saunders III Professor Emerita of Nursing,
University of Virginia School of Nursing*
